Parents Dashboard – V1 Product & Data Spec (YouTube-only)

Purpose: Create a calm, trustworthy Parents dashboard that helps families generate, save, and reuse **safe YouTube playlists** using simple filters. No creator tools. No analytics overload. No TikTok or Instagram required.

---

1. Platform Scope (Very Important)

- **YouTube only** (public video + channel data)
- **No TikTok / Instagram** for Parents in V1
- Optional (V2+): allow parents to *connect* child accounts for awareness only — **not required and not needed for V1**

Rationale: YouTube is the only platform with transcripts + explainability needed for age and safety decisions.

---

2. Age Framework (School-aligned, simple imply)

Parents select an **Age Band**, not a birthdate.

Age categories: - **Early Years:** 3–5 - **Primary:** 6–8 - **Upper Primary:** 9–11 - **Early Secondary:** 12–14 - **Mid Secondary:** 15–16 - **Older Teens:** 17–18

Notes for system: - Under 16 = stricter safety thresholds - 16–18 = lighter filtering but still explainable - 18+ = Parents dashboard not required (out of scope)

---

3. Parent User Flow (High level)

1. Parent signs up
2. Creates **Child Profile** (age band + preferences)
3. Clicks **Create Playlist**
4. Selects simple filters
5. System generates playlist
6. Parent can:
7. Play
8. Save
9. Loop/reuse
10. Regenerate with same filters

---

4. Playlist Creation – Filters (Keep this easy)

Required Filters (V1)

- **Age band** (from section 2)
- **Content type**:
- Educational
- Entertainment
- Story / Narrative
- Movement / Activity
- **Tone / Energy**:
- Calm
- Balanced
- High-energy
- **Session length**:
- 10 mins
- 20 mins
- 30 mins
- 60 mins
- **Language**

Optional but Valuable Filters (still simple)

- **Time of day**:
- Morning (focus)
- After school
- Wind-down / bedtime
- **Ad tolerance**:
- Low
- Medium
- **Repetition tolerance**:
- OK to repeat
- Avoid repetition

Do NOT expose too many toggles at once — progressive disclosure.

---

5. Playlist Behaviour

Each playlist: - Is **generated from filters** - Has a unique ID - Can be: - Saved - Re-opened - Regenerated (same filters) - Shared (later phase)

Looping behaviour

- Playlist loops **within its own list only**
- No algorithmic recommendations outside playlist

---

6. Playlist Viewer (Consumption UX)

Playlist page shows: - Embedded YouTube player - Video list (locked to playlist) - Playlist summary panel: - Age band - Content type - Tone - Session length - **“Why this playlist is suitable”** (plain language)

This must *not* feel like YouTube — it should feel like a safe viewing room.

---

7. Data & Analysis (Behind the scenes)

Stored per video

- Video ID
- Channel ID
- Title + description
- Transcript (if available)
- Duration
- Publish date

Analysis performed (not shown raw to parents)

- Language complexity
- Topic detection
- Risk theme detection (violence, fear, adult topics, etc.)
- Energy proxy (pace, cuts inferred from metadata)
- Consistency & predictability

Output shown to parents

- Simple labels only
- Clear explanations
- No scores, charts, or jargon

---

8. Playlist Limits (Pricing logic)

Free / Trial

- 1 saved playlist
- Unlimited regeneration of that playlist

Paid (example)

- 5–10 saved playlists
- Multiple child profiles
- Playlist history

(Exact numbers adjustable later.)

---

9. What Parents Dashboard Is NOT

To avoid scope creep: - ❌ No Creator tools - ❌ No Leaderboards - ❌ No Viral analysis - ❌ No TikTok / Instagram - ❌ No competitor views

Parents = **filters → playlists → calm viewing**

---

10. Summary for Dev

- Parents dashboard is a **standalone product surface**
- YouTube-only
- Filter-driven playlist generation
- Age-aligned to school stages
- Minimal UI, maximum trust

This spec is V1-ready and intentionally narrow so it can ship fast and feel solid.
